Sustainability is not just something to learn, it’s something to live!

- Students should learn about sustainable development and global citizenship to help them understand the world they live in.
- School garden programmes can teach healthy eating and help build an emotional connection with the natural world.
- Education is the best tool for climate change awareness.
- Schools should build relationships and engage with community issues.
- Solar panels, energy saving lightbulbs, and renewable materials are used in school buildings to promote sustainability.
- School buildings should be safe and sustainable, conserving water and energy and reducing waste.
- The whole school approach addresses the needs of all learners.
- The whole school approach to sustainability brings together what is taught, how it’s taught, extracurricular activities, teacher training, decision making processes, the physical buildings, the environment, and the wider community.
