One year into COVID: Prioritizing education recovery to avoid a generational catastrophe
High-level ministerial meeting
29 March 2021

Session 1
Keeping schools open, prioritizing and supporting teachers

Speakers’ presentations
What does the evidence tell us about keeping schools open safely

State-of-the-art review of the evidence

Pr. Didier Jourdan
UNESCO Chair and WHO collaborating center in ‘Global Health & Education’
Three solid facts

1. Schools should be among the last places to be closed and first to reopen
2. School reopening, with comprehensive infection prevention and control measures in place, and when the community infection levels were low or moderate, did not increase community transmission
3. Implementation mechanisms in schools involve institutional, contextual and personal factors
Schools should be among the last places to be closed and first to reopen
Impacts of school closures on health and education of children and young people

• Major impact on education: learning loss in core subjects, declines in college enrolment, increase in socioeconomic skills gap...

• Impact on physical, mental and social development and wellbeing

• Restricting access to school meals, health visiting, social care and school-based vaccinations disproportionately impact children from disadvantaged backgrounds.

Haeck And Lefebvre 2020, Parnham et al., 2020, Kahfeld et al. 2020, Viner et al. 2021
School closure among the non-pharmaceutical interventions

- Stay-at-home orders targeted at risk groups, teleworking, closure of non-essential businesses and services, bans on gatherings of 50 individuals or more are the most effective prevention measures.

- School closures can contribute to a reduction in SARS-CoV-2 transmission, but by themselves are insufficient to prevent community transmission of COVID-19 in the absence of other non-pharmaceutical interventions.
School reopening, with comprehensive infection prevention and control measures in place, and when the community infection levels were low or moderate, did not increase community transmission.
SARS-CoV-2 infection rates and school reopening

Cases in school-aged children lagged behind and followed adult trends after schools reopened, with a strong age gradient in weekly infection rates. Younger children (<10 years of age) are less likely to be infected than adolescents.
SARS-CoV-2 transmission within the school setting

• Significant secondary transmission can - and does - occur in school settings when prevention strategies are not implemented or followed.

• Comparing county-level COVID-19 hospitalizations between counties with in-person learning and those without in-person learning found no effect of in-person school reopening on COVID-19 hospitalization rates when baseline hospitalization rates were low or moderate (75% of the counties).

Mc Cartney et al 2020, Harris et al. 2021
Influence of the reopening on community transmission

A systematic review of observational studies showed most studies reported that school reopening, with extensive infection prevention and control measures in place and when the community infection levels were low or moderate, did not increase community transmission of SARS-CoV-2.

Metcalfe 2021
The implementation of preventive measures

A survey on National Education Responses to Covid-19 School Closures finds that in nearly all governments produced or endorsed specific health and hygiene guidelines and measures for schools.

Only around half of low-income and lower-middle income countries reported having enough resources, in comparison to 80 per cent of upper-middle-income countries and 95 per cent of high-income countries.
The implementation of preventive measures

• A survey concerning 42 countries showed the creation of the guidelines is perceived to be health-led, with limited understanding and appreciation of the school context.

• Implementation was facilitated by staff commitment and communication among stakeholders, but hampered by limitations with guidance received, physical environments, resources, parental adherence and balancing health promotion measures with learning.

• Research shows 3 main factors influences the adoption of new practices by teachers: institutional, personal and contextual.

Gray et al. 2021
The implementation of preventive measures

• Supporting every school to integrate health issues into their management and teaching is a priority.
• Such school policy should include the basic elements of:
  • protection,
  • prevention,
  • education.

Jourdan 2021, Jourdan et al. 2021, Tessier et al. 2021
Conclusion

1. Reducing transmission in schools is a shared responsibility and needs a combination of effective prevention strategies desegregated by age and communities - implemented with the ability and commitment to adhere to them.

2. Strong implementation strategies based on educators’ involvement and the provision of technical and pedagogical resources in each school is necessary.

KEEPING SCHOOLS OPEN, PRIORITISING AND SUPPORTING TEACHERS

UNESCO HIGH LEVEL MINISTERIAL MEETING:
ONE YEAR INTO COVID: PRIORITIZING EDUCATION RECOVERY TO AVOID A GENERATIONAL CATASTROPHE

Mugwena Maluleke
General Secretary, South African Democratic Teachers’ Union

29th March 2021
KEEPING SCHOOLS OPEN

ONE YEAR LATER

LIVING & LEARNING WITH COVID-19...

ON THE WAY TO SCHOOL

IN CLASS

1. Sanitise
2. Wear your face mask
3. Keep your distance
4. And repeat daily...
## Overview of Key Points and Structure: Teacher Leadership Has Been Key to Keeping Schools Open

<table>
<thead>
<tr>
<th>Teacher commitment to Keeping Schools Open</th>
<th>Role of Teacher Unions:</th>
<th>Challenges</th>
<th>Public Leadership role</th>
</tr>
</thead>
</table>
| • Professional commitment to schools as a key intervention/ interrupter of inter-generational poverty | • Keeping members informed – the Union is a trusted source of information regarding the pandemic  
• Maximising safety of teachers (and learners)  
• Monitoring school readiness in terms of provision of necessary PPE and fundamental infrastructural provision (e.g. water and sanitation)  
• Securing comorbidity leave etc | • Teacher well-being, stress and burn-out  
• Accumulated loss of opportunity to learn  
• Potential for increased disengagement form school and drop-out | • Informing the public about health and safety issues using mass media  
• Mobilising communities to support teachers during the crisis and  
• Engaging with the Scientists to provide more light |
