

Submission # 105

Name:Ahmad Bahlak

Organization:Engineering Student

Country/Region:Lebanon

How would you define the stakeholder community or communities to which you belong?

Internet technical and professional community

Are there any suggestions that you wish to make in respect of the proposed themes, questions and indicators which are included in the framework as it stands?

I suggest to complete the indicators by covering all "Open Solutions" promoted by the UNESCO, in the category Openness and not only Open Standards (Theme B), Open Markets (Theme C), Open Content (Theme D), and Open Data (Theme E) but also create a specific theme on Free Open Source Software.

Are there any suggestions that you wish to make in respect of the proposed themes, questions and indicators which are included in the framework as it stands?

The question could be in addition to the questions B.3 the following :

- The production of Free Open Source Software in the country

What sources and means of verification would you recommend, from your experience, in relation to any of the questions and indicators that have been proposed?

All countries have to give the number of produced software and specifically the FOSS products in their country. We may refer to the Ministry on Industry statistics of each country
