BELIZE BARRIER REEF RESERVE SYSTEM - MODEL TO COPE WITH CLIMATE CHANGE

Beverly Wade
Ministry of Blue Economy and Civil Aviation - BELIZE
Belize Barrier Reef Reserve System

Cluster Site:

- Bacalar Chico National Park and Marine Reserve - 11,399 ha
- Glover’s Reef Marine Reserve - 35,067 ha
- South Water Caye Marine Reserve - 47,700 ha
- Sapodilla Cayes Marine Reserve - 15,619 ha
- Laughing Bird Caye National Park - 4,095 ha
- Blue Hole Natural Monument - 414 ha
- Halfmoon Caye National Monument - 3,954 ha
Key Accomplishments:

- Fisheries Resources Act; National Fisheries Policy, Strategy and Action Plan
- Integrated Coastal Zone Management Plan and Regional guidelines; currently being updated.
- Parrotfish ban since 2009; improved coral health over last decade (currently highest reef health score in the region)
- National Rollout of Manage Access
- Adaptive Management Plans - Lobster and Conch
- Expansion of marine reserve network (increase areas under protective status; proposed expansion of replenishment zones up to 10% of territorial waters
- Update of the Mangrove regulations and the Environmental Impact Assessment regulations
- Moratorium - Offshore Oil Exploration
- Promoting value added products, improving efficiency within the supply and value chains and seeking higher value markets for the fisheries sector
Coral Restoration

Addressing invasive species
Desired State of Conservation - 2016

- UNESCO World Heritage Programme
- IUCN
- Key National Stakeholders

BBRRS removed from WH “in Danger” List in 2018; mangrove reserves pending
Desired State of Conservation -2016

II. No areas within the property and in its immediate vicinity are developed in ways that affect the property’s natural outstanding beauty and status as a globally significant natural phenomenon of Outstanding Universal Value

- Adoption by law, implementation and adequate enforcement regulations that specify the type, scale and density of coastal development consistent with the requirements to maintain the property’s natural outstanding beauty and that of its immediate surroundings, including establishment of areas where no development should be permitted.

Completed by 31 December 2016

The amendment of the EIA regulations was adopted on February 8, 2020.

Area specific development guidelines were developed under the ICZMP.

Mangrove regulations provide special protection/stricter measures to mangroves in “Priority Mangrove Areas”.

III. All areas within the property and the surrounding areas that support the ecological functioning of the system are excluded from oil exploration and exploitation

- A map that defines, on the basis of oceanographic, ecological and other scientific information, the property’s surrounding areas where no oil exploration and exploitation can be permitted.

- Legal adoption of a permanent exclusion of the entire property and the defined surrounding areas from oil exploration and exploitation

Completed by 31 January 2016

The Parliament of Belize approved the Petroleum Operations (Maritime Zone Moratorium) Act No. 54 of 2017 in December 2017, which states that all oil exploration and exploitation is now prohibited in the entire maritime zone of Belize.

IV. The property is managed effectively and in an integrated way that will ensure the protection of its Outstanding Universal Value, and appropriately allows for achieving both sustainable socio-economic and environmental goals

- Adoption, implementation and effective enforcement of the Integrated Coastal Zone Management Plan, reflecting the World Heritage status of the property and its conservation and sustainable use requirements and consistent with the plan’s draft version of January 2015.

Completed by 31 December 2016

ICZM plan approved on Feb. 9th, 2016.

The ICZM plan was being implemented through funding under the Marine Conservation and Climate Adaptation Project (MCCAP).

Area specific development guidelines were developed under the ICZMP.

Currently, the process to update the ICZM Plan and its regional guidelines has begun.
The Resilient Reefs Initiative is committed to working with each site to develop a resilience strategy that directly responds to the site’s core challenges, and integrates resilience into the site’s management processes.
Developing a Resilience Strategy for the BBRS

- Belize is one of five World Heritage coral reef sites selected.

- The resilience strategy will set a **bold** vision for the future, be **innovative** and **integrated** in its thinking, and will prioritize implementing **local short and long-term solutions** that will **directly address** the reef and reef community’s **vulnerabilities**.

![Strategy Diagram]

- **Appointment of a Chief Resilience Officer**
- **Site establishment**
  - Due diligence, understanding local context, contract execution, CRO recruitment
- **Strategy development**
  - Resilience Assessment, stakeholder engagement, research & capacity building
- **Strategy launch**
- **Action implementation**
  - Design and deliver resilience actions, develop partnerships, measure impact and share and scale learnings
Thank you!
