**A. Context**

Education, learning and school are interwoven and complicated educational elements. Currently, apart from schooling, family and Intergenerational literacy-learning approaches are recognized as effective means of developing and improving the literacy, numeracy and foundational skills of adults, youth and children. By applying these approaches, family and intergenerational literacy programmes create synergies between early childhood care and education, primary education and adult learning. Research on family and intergenerational literacy and learning programmes reveals that there are immediate as well as long-term benefits for children, youth and adults in relation to their educational and economic opportunities, well-being and civic participation. Examples of family and intergenerational literacy and learning programmes implemented around the world have shown that these programmes do not only improve the literacy and numeracy of parents, especially that of mothers, but also enable disadvantaged families to support their children's education. In addition, family and intergenerational literacy programmes cultivate a strong culture of learning within families and communities and forge strong bonds between family members. This approach contributes to building resilient and literate families (Hayes, 2006; Tuckett, 2004; Brooks, Pahl, Pollard and Rees, 2008; Carpentieri, Fairfax-Cholmeley, Litster and Vorhaus, 2011; Hanemann, 2015).

UNESCO promotes family literacy and learning as a holistic approach that contributes to the achievement of the fourth Sustainable Development Goal (SDG4), which strives to “ensure inclusive and quality education and promote lifelong learning for all” (UNESCO 2016, p. 29). More specifically, this approach can help achieve SDG targets 4.1 (complete free, equitable and quality primary and second education), 4.2 (quality early childhood development, care and pre-primary education), and 4.6 (youth and adult literacy and numeracy). For more than a decade, the UNESCO Institute for Lifelong Learning (UIL) has been developing resources and providing technical support to selected Member States. For instance, with the support of UIL, countries such as Mexico, Mozambique, Timor-Leste and Germany piloted and scaled up country-specific models of family and intergenerational literacy and learning programmes. Since 2017, such past efforts were further enriched with the help of the generous financial support of the Federal Foreign Office of the Federal Republic of Germany. Among the main achievements of the past three years are the consolidation and production of general guidelines on family and intergenerational literacy and learning programmes.
